STATIC TANKS

- Horizontal aboveground tanks
- Horizontal underground tanks
- Vertical aboveground tanks

- Static tanks for the storage of **LPG** in aboveground and underground installations, made in accordance with **European Directive 2014/68/UE** and with **CE** marking. Upon request we can manufacture tanks to the regulatory requirements of the place of destination.
- Optionally any tank capacity can be manufactured in accordance with **ASME VIII div. 1** and **ASME** marking.

- **CAPACITIES:** capacities from 1 to 400 m³. Thanks to our extensive range of diameters, the scope of possible tank sizes always allows storage capacity requirements to adapt to the characteristics of each project.

- **STORED PRODUCT AND DESIGN PRESSURE:**
The information in this catalogue refers to storage of LPG at a design pressure of 20 bar.
For other products of similar characteristics or other pressures, please consult us.

- **FINISHES:** External tank protection with finishes that are highly resistant to corrosion, both for aboveground and underground installations.

- **Standard finish:** Shot-blasting of the whole of the outer surface of the tank, application of high protection capacity epoxy-polyamide primer and top coat of white or black polyurethane depending on whether the tank is installed aboveground or underground.
- **Special finishes:** "thick coat" finish for underground tanks, highly resistant to impacts and with dielectric strength certification (up to 15.000 V).
- **Special finishes at customer's request:** Special finishes according to our customer's specifications and/or project requirements.

VALVES: Tanks with capacities < 20 m³ include the standard valve sets in the supply.

For tanks with capacities greater than 20 m³, the valve equipment is listed in this catalogue (page 16).

CATHODIC PROTECTION: Cathodic protection equipment comprising sacrificial anodes (optionally with bag of activating mix), wiring and connection terminals, dimensioned for each of the tank models for underground installation.

OPTIONS:

Centred connections: All models can have the "centred outlets" option (which can be useful when establishing safety distances for installation).

Valves mounted: the tank can be supplied with the valve equipment mounted, with valves tightness test and tank inerted with nitrogen.

Tanks with anchor slab: Sets of tank-concrete anchor slab for capacities of up to 8.334 litres.

(*) Models LP11E and LP13E-17 include a rectangular inspection chamber

Data (shown in the table), valid for aboveground and underground tanks.
Outlets and valves: see page 15.

CHARACTERISTICS TABLE

(1) Propane stored in kg, considering a degree of filling of 85% of the tank and a LPG density of 0.5 kg/l.

**=A: for aboveground tanks- *=E: for underground tanks
G1: dimension for option <centred outlets>

STATIC TANKS FOR STORAGE OF LPG

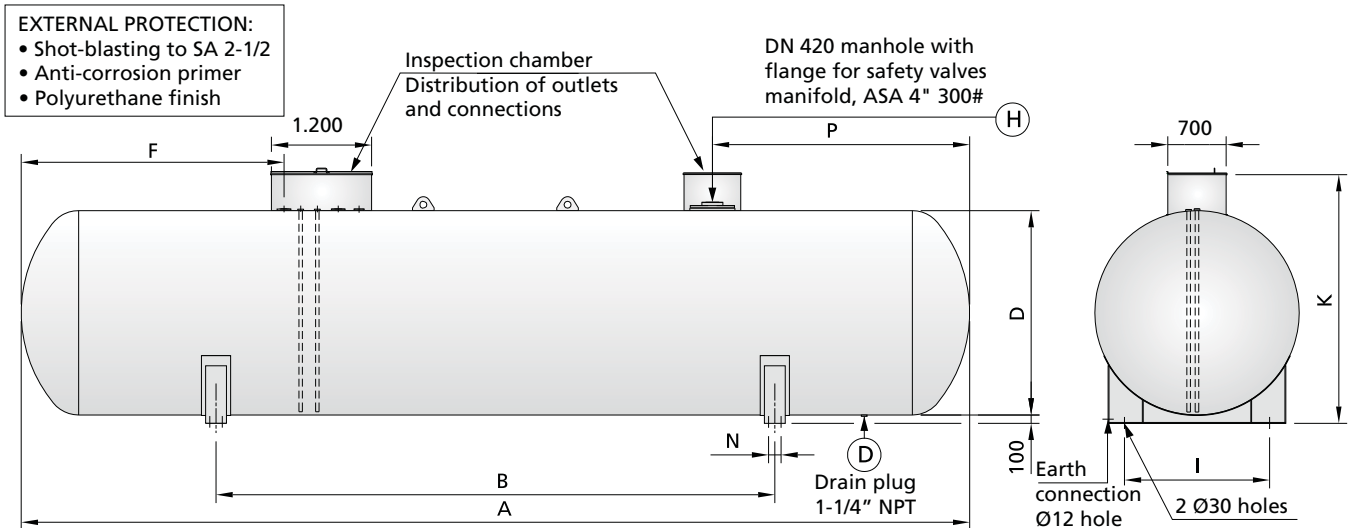

HORIZONTAL ABOVEGROUND, 2.200 and 2.450 mm diameters (greater than 20 m³)

(1) Propane stored in kg, considering a degree of filling of 85% of the tank and a LPG density of 0.5 kg/l.

These models have two inspection chambers: one for the set of service valves and another for the safety valve manifold, as well as for the manhole. Optionally they can be supplied with a single inspection chamber (centred valving). The inspection chambers are supplied unassembled. Outlets and valves: see page 16.

(1) Propane stored in kg, considering a degree of filling of 85% of the tank and a LPG density of 0.5 kg/l.

STATIC TANKS FOR STORAGE OF LPG

HORIZONTAL ABOVEGROUND/UNDERGROUND 2.200 & 2.450 mm Ø (≤ de 20 m³ SPECIAL SERIES)

- EXTERNAL PROTECTION:**
- Shot-blasting to SA 2-1/2
 - Anti-corrosion primer
 - Polyurethane finish

For information purposes, a group of officially approved tanks is indicated which do not form part of our standard production but can meet requirements for special sizes or capacities. The details in models with capacities of less than 20 m³ are valid for both aboveground and underground installation.

(1) Propane stored in kg, considering a degree of filling of 85% of the tank and a LPG density of 0.5 kg/l.

*=A, for aboveground tanks. *=E, for underground tanks.

EXTERNAL PROTECTION:

- Shot-blasting to SA 2-1/2
- Anti-corrosion primer
- Polyurethane finish

LARGE DIAMETER series models.

- The size, distribution and distance between connections and other elements can be adapted to meet the requirements of each project.
 - Details of the external surface finish are to be confirmed at the quotation stage.
 - Optional supply of valve sets corresponding to each tank model.
 - The drawing shows tanks for aboveground installation.
- Same capacities for underground installation (please consult).
Outlets and valves: see page 17.

(1) Propane stored in kg, considering a degree of filling of 85% of the tank and a LPG density of 0.5 kg/l.

ACCESSORIES

- Valve equipment
- Cathodic protection equipment
- Covers / inspection chambers
- Anchor slabs
- Anti-flotation trays
- Booths for cylinders

VALVE EQUIPMENT

Availability of valve equipment adapted to all our range of LPG storage tanks. The supply of valves is included in our standard range of tanks up to 59 m³ capacity. As an option, the valve equipment can be supplied ready mounted on the tanks, with air-tightness test and tank inerted with nitrogen. Specific valves and equipment for special tanks can be supplied upon request.

CATHODIC PROTECTION EQUIPMENT

Cathodic protection equipment for underground tanks, comprising magnesium anodes with connecting wires and terminals, suitable for the tank size and surface area. Bag of activating mix can be supplied as an option. Examples of anode installation and recommended distances for anodes around the underground tank are shown on page 18.

COVERS/ /INSPECTION CHAMBERS

Lockable, hinged protective valve covers for aboveground tanks. Stainless steel or PVC valve inspection chambers for underground tanks. Special inspection chambers adapted to the characteristics of the tank and/or installation.

ANCHOR SLABS FOR ABOVEGROUND TANKS

Concrete slabs for screwing down support legs of aboveground tanks up to 8.334 litres capacity. This system replaces the civil works required to support tanks and in many cases represents a considerable saving on installation costs.

ANTI-FLOTATION TRAYS FOR UNDERGROUND TANKS

HDPE and PVC anti-flotation anchoring trays with support cradle, for 1.000 and 1.200 mm diameter underground tanks. Supplied already fitted to tanks, with side trays folded for transport.

BOOTHS FOR CYLINDERS

Lockable galvanized steel plate booths with doors to store 13 kg and 35 kg LPG cylinders. Capacity: eight 35 kg cylinders or sixteen 13 kg cylinders in two-section version and twelve 35 kg cylinders or twenty-four 13 kg cylinders in the three-section version. The booth is supplied unassembled and palletized for assembling at site.

VALVE EQUIPMENT / HORIZONTAL TANKS

CAPACITY UP TO 13,0 m³

- Filling valve: connection to tank 1-1/4" NPT and connection to hose or pipe 1-3/4" ACME.
- Chek-lok 3/4" NPT to fit at drain.
- Limiter + stopvalve + 1-1/4" NPT plug for the liquid phase.
- Multi-valve 3/4" NPT at gas phase outlet, with pressure gauge, high point and flow rate limiter.
- External safety valves with valve manifold.
- ROCHESTER. magnetic level.
- Plug at connection of lower generatrix.

CAPACITY FROM 13.1 to 20.0 m³

Same equipment as above, except for:

- Gas phase outlet: flow rate limiter and shutoff valve.
- High point valve and pressure gauge, in separate connection from gas phase outlet.

CAPACITY FROM 20.1 to 50.0 m³ (diameters 1.500 and 1.750 mm)

Same equipment as before, except for:

- Safety valves mounted on manifold.

CAPACITY FROM 20.1 to 50 m³ (diameters 2.200 and 2.450 mm)

Same equipment as the previous one except for:

- 1-1/4" Chek-lok for purge placement.
- ROCHESTER magnetic level MAGNETEL type.
- Buried tanks have a cap on the lower generatrix.

CAPACITY GREATER THAN 50.1 m³

- Filling, liquid phase, gas phase: Flanges ASA 300# 2" NPT.
- High point valve and manometer.
- Chek-lok 1-1/4" NPT for drain (Except diameters >2.450: Flange ASA 300# 2" NPT).
- ROCHESTER MAGNETEL type 8" magnetic level.
- Safety valves mounted on manifold.
- Immersion bulb thermometer, 1/2" (tanks of more than 60 m³).

(1) The indicated valve in the STD option is limited to a filling of the 85%.

(Examples of valve equipment for Lapesa tanks)

NOTES

The tanks are supplied upon request with valves mounted and inertized.

The external safety valves with check device allow valves to be dismantled in order to replace them, to carry out pressure tests, etc. without the need to empty the tank.

Note that the check device is not completely watertight once the safety valve has been removed.

In the case of safety valves mounted in a manifold, the manifold has a mechanism inside that allows one of the valves to be replaced without the need to empty the tank.

Optionally, for 1 m³ tanks, instead of supplying a regulation equipment of 40 kg/h, a regulation equipment of 12 kg/h can be supplied, and for tanks with a higher capacity than 5 m³ a regulation equipment of 100 kg/h can be supplied.

TABLE OF MANIFOLDS FOR SAFETY VALVES

MAKE	CAEN			REGO		
	CDS	CTS	CCS	8572	8573	8574
Model						
Manifold discharge (m ³ /min.air)	403	806	1209	300	601	910
Maximum allowable surface area of underground tank (m ²)	129,7	302,1	495,2	90,5	211,2	350,2
Maximum allowable surface area of aboveground tank (m ²)	84	195,5	320,5	58,6	136,7	226,7

This table can be used to choose the type of manifold according to the discharge that the tank requires or the surface area it has. Manifold discharges are carried out at an opening pressure of 20 bar and at 20% overpressure. Manifold valves are set at 20 bar
Connection of manifold to tank: ASA 4"300#

CATHODIC PROTECTION FOR UNDERGROUND TANKS

When considered advisable, the underground tank should be equipped with active protection against corrosion. The type of cathodic protection equipment will be decided by specialized technicians, taking into account the specific characteristics of each installation. The following is an example of the cathodic protection system that LAPESA can supply, with sacrificial anodes (without impressed current).

- Anodes usually last 15 years, generating the potential specified in the standard, however it depends on the type of soil and the area in which it is installed. In some cases it will be necessary to place an activating mix around the anode.
- Anodes are connected to the tank through special holes in the lifting lugs.
- Optionally the cathodic protection equipment can be supplied with a bag of activating mix.

DETAIL OF INSTALLATION* OF ANODES IN UNDERGROUND TANKS

LOCATION OF ANODES IN UNDERGROUND TANK WITH PIT

LOCATION OF ANODES IN UNDERGROUND TANK WITHOUT PIT

(*) Insulate connections with self-vulcanizing tape. Ensure correct contact of all connections. The tank should be electrically insulated from the rest of the installation (pipes, etc.).

TECHNICAL INFORMATION

- Foundations and pits
- Natural vaporization tables
- LPG maximum degree of filling
- LPG pressures
- Tanks for storing ammonia (NH₃)

FOUNDATIONS AND PITS

The foundations and pits for aboveground and underground tanks shown on pages 21 to 25 are for information purposes and should be reasoned for each specific installation project, apply the regulations in force.

NATURAL VAPORIZATION TABLES

The natural vaporization values in a LPG tank depend on several factors related to the tank itself, the type of installation: aboveground or underground, consumption flows, ambient temperature and type of mix contained, amongst other factors. The tables provided on page 26 show the natural vaporization values for our standard models of tanks for propane in the conditions of installation and use indicated.

MAXIMUM DEGREE OF FILLING

The maximum degree of filling for LPG tanks according to current regulations is 85%.

The table on page 27 gives the maximum filling heights for the tank and the free liquid heights, for the adjustment of the tubes on the valves indicating the maximum filling level.

TANKS FOR STORING AMMONIA (NH₃)

The whole range of tanks for LPG presented in this catalogue can be produced for storing anhydrous ammonia, by adapting their design:

- Officially approved tanks for storing NH₃
- Design pressure: 22 bar
- Composition materials compatible with NH₃
- Corrosion allowance thickness: 1 mm
- Increase in X-ray control of welds
- Post welding heat treatment

FOUNDATIONS FOR ABOVEGROUND TANKS 1.200, 1.500 and 1.750 diameters

Foundation valid for tanks with drain valve on bottom generatrix.

DETAIL OF ANCHORING FOR TANKS OF Ø1750 AND CAPACITIES GREATER THAN 20 m³

Option: Threaded studs housed in hole in concrete with bonding dowel (not expanding dowel)

The following are some of the suggested foundation options. Foundations must be calculated for each specific installation project.

Dimensions of supports for terrains with a bearing capacity of 1 kg/cm²

P	800	1.100	1.500	1.900
R	1.110	1.235	1.510	1.760

(*) For this system the following is recommended:

- 1- Build a flat wall with a height of 800 mm
- 2- Place the tank on top.
- 3- Carry out formwork once the tank is in place to obtain the indicated shape.

TANKS WITH WELDED SUPPORTS

PITS FOR UNDERGROUND TANKS OF LESS THAN 20 m³

Option: Threaded studs housed in hole in concrete with bonding anchor dowel (not expanding dowel)

The dimensions indicated in the table are obtained based on a distance of 500 mm from the tank to the pit walls and a distance of 300 mm to the cover. For the "centred outlets" options (1.200, 1.500 and 1.750 mm diameters) dimension A should be corrected in accordance with dimension G1 of the table on page 15.

In addition to the pit shown, other types of pits can be made according to the regulations in force

MAX. DEGREE OF FILLING

The maximum degree of filling specified in regulations is 85%. The height of the liquid-free part depends on the ratio: $h \sim 0.21 \text{ int. D}$

Valve tubes indicating maximum degree of filling (high point) should be cut taking into account the height and the part of the tube that is inserted in the valve.

LPG PRESSURES

The following table shows the LPG pressure depending on the mix and the temperature:

Temperature °C	Pure propane 100%	Commercial mixes % propane / % butane					
		85% / 15%	60% / 40%	40% / 60%	15% / 85%	0% / 100%	
45	14,3 bar	12,7 bar	9,9 bar	7,7 bar	5,0 bar	3,3 bar	
50	16,1 bar	14,3 bar	11,2 bar	8,8 bar	5,8 bar	4,0 bar	
55	18,0 bar	16,0 bar	12,7 bar	10,0 bar	6,6 bar	4,6 bar	

The default pressure for the tanks in this catalogue is a design pressure of 20 bar.

FORCED VAPORIZATION

- Tanks with internal vaporizer
- Tanks with atmospheric vaporizers
- **"FEED OUT"** vaporizers
- Modular vaporization units
- Modular heating units

These systems add forced vaporization to the natural vaporization capacity of the tank, for installations with high consumption and space restrictions.

Tanks with internal vaporizer:

Tanks with removable heat exchanger built into the bottom part of the tank for forced LPG vaporization, for connection to water heating circuit via a heating boiler.

Optionally the tank can be supplied with the valve equipment already fitted, pneumatically tested and with nitrogen inerting of the tank. At the customer's request the tanks can be supplied with a gas train to regulate consumption in a stainless cabinet or on a support frame.

Tanks with atmospheric vaporizer:

Tanks with external water-air heat exchanger.

Modular heating units for tanks with internal vaporizer:

Complete heating modules ready for connection to the LPG tank internal vaporizer. These units comprise a wall-hung condensation boiler and electrical control and protection cabinet, totally installed in a metal booth with all of the necessary valves and pipes for connection and start-up.

Modular vaporizers:

Own design LPG "Feed-out" vaporizers. Vaporization capacities from 500 to 5.000 Kg/h.

Modular vaporization units:

Equipment with complete modular vaporizer installed inside metal booth, with the necessary valves and pipes for connection to the heating module and consumption system.

Heating control units for modular vaporizers:

Complete heating modules, ready to be connected to the modular vaporization units.

They comprise a heating boiler and electrical control and protection cabinet, fully installed in a metal booth with the pumps, valves and pipes required for connection and start-up.

lapesa
Solutions

ABOVEGROUND
TANKS WITH
**REMOVABLE
INTERNAL
VAPORIZER**

- Vessels according to Lapesa’s standard models, with removable internal vaporizer. Different vaporization capacities for each volume (see table)
- Heat provided via heating circuit.
- Lapesa has heating modules for installation with this unit (see page 34).
- This unit incorporates the benefits of a **FEED BACK system** and takes advantage of the natural vaporization of the tank.
- The tank’s safety valves must be capable of discharging both natural and forced vaporization, which means they may vary between models from those of a standard tank without an internal vaporizer.
- The rated vaporization values indicated in the tables are only valid for tanks with 20% minimum degree of filling, which guarantees that the vaporizer is submerged in LPG.
- **OPTIONAL ITEMS:**
 - Frame for tank.
 - NO-GAS device. Prevents gas input to heating circuit in the event of a connection between the two.
 - Gas control line.
 - Other options.

(1) (Rest of data like std. models)

NOTES

- For details of natural vaporization with different tanks: please consult pages 26 and 27.
- Data valid for commercial propane only.
- Vaporization capacity decreases for gas delivery pressures of more than 3 bar (please consult)
- For ambient temperatures of less than -10°C, boiler power must be increased.
- Other volumes and capacities can be configured (please consult).
- Units for underground installation can be designed and manufactured upon request. (Please consult).

**ABOVEGROUND TANKS
 WITH **ATMOSPHERIC**
 VAPORIZER**

Storage tanks according to Lapesa standard models, with atmospheric vaporizer.

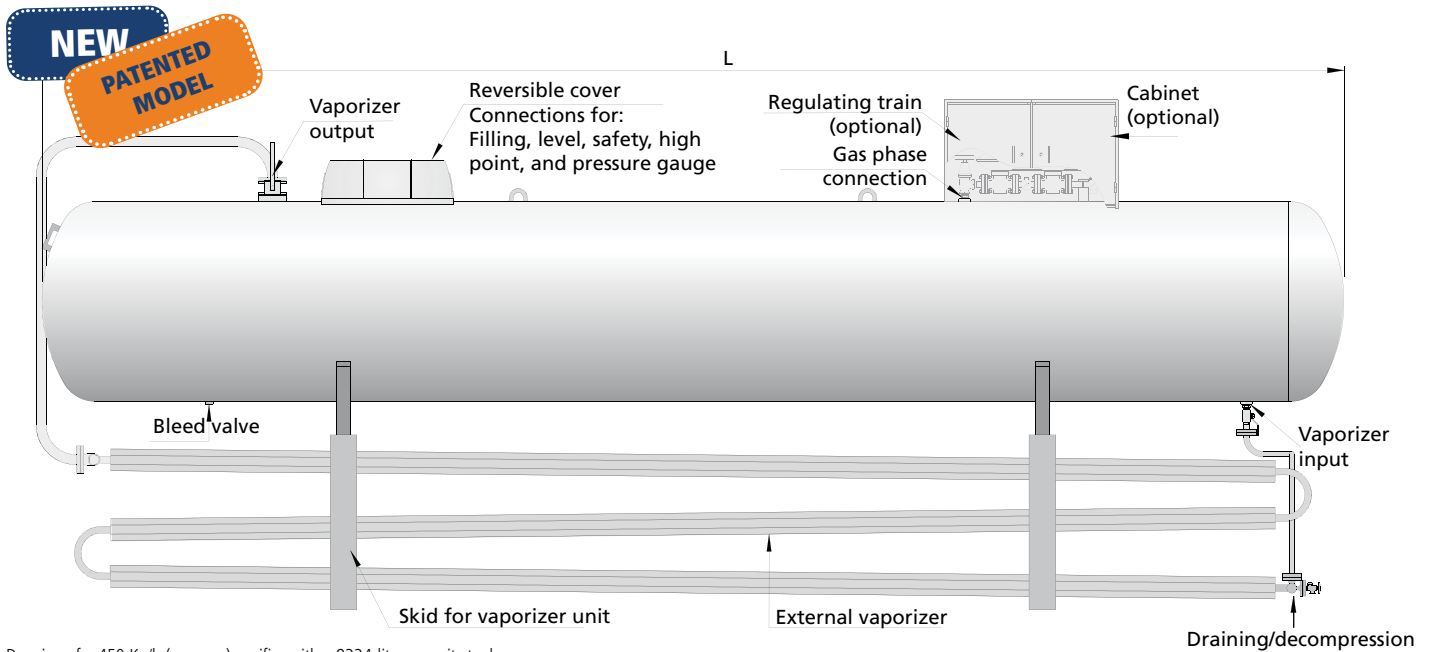

CHARACTERISTICS

- Propane tank that incorporates external vaporizer.
- This system increases the natural vaporization capacity of tanks.
- Vaporization is obtained by heat exchange with the ambient.
- Includes all the advantages of a feed-back system.

ADVANTAGES WITH RESPECT TO FORCED VAPORIZATION

- Savings:
 - Simple and economical installation.
 - Maintenance free.
 - No additional consumption (electricity, gas, etc.)
- Safety:
 - No additional pieces which could break down.
 - No electrical material used, neither boilers with flames.
- Installation time is greatly reduced.
- Environment-friendly: energy consumption 100% renewable.

Drawing of a 450 Kg/h (propane) gasifier with a 8334-litre capacity tank.

ATMOSPHERIC VAPORIZER

Model	Nominal vaporization (kg/h) ⁽¹⁾	Approx. length (mm)	Approx. height (mm)
VA50	50	3.000	250
VA150	150	7.400	400
VA300	300	7.400	750
VA450	450	7.400	1.000

(1) Nominal vaporization corresponds to the nominal working conditions:
 - Service pressure 1,5 bar
 - Ambient temperature 10° C
 - LPG: 80% propane, 20% butane

VAPORIZATION DATA

	1,75	13	100	197	300	407	517	630
	2	-	64	159	260	366	476	588

SOME FACTORS MAY MODIFY THE VAPORIZATION CAPACITY:

- Continuous consumption (see table with correction coefficients to be applied in continuous operation)
- Adverse environmental conditions (low temperature and high humidity)
- Installations that prevent an adequate ventilation
- Different LPG mixture than the nominal one

To minimize these effects, different solutions can be applied (please consult)

CORRECTION COEFFICIENTS⁽²⁾ FOR CONTINUOUS OPERATION:

Hours/day	Efficiency Fh
≤4	1
8	0,8
16	0,5
24	0,4

(2) Multiply the vaporization values of the tables by the correction coefficient

NOTE

Depending on the tank and vaporizer sizes, the unit can be sent completely mounted, including the piping between both elements. Otherwise, the elements will be mounted on site.

COMPACT HEATING UNITS FOR TANKS WITH INTERNAL VAPORIZER

Comprised by a sealed wall-mounted condensing boiler prepared for propane gas operation, an electrical cabinet and all the pipes and valves necessary for its connection with the LPG vaporization equipment. All this housed and prepared for connection and commissioning. Ideal to install together with internal vaporizers.

CHARACTERISTICS TABLE

Model	Boiler power (kW)	Weight (Kg.)	For internal vaporizers	
VPC30C	45	265	VIA 300	VIA 150
VPC60C	65	275	VIA 500

- 2.- Boiler
- 3.- Adjustable feet
- 4.- Electrical control cabinet
- 5.- Gas supply to boiler (DN15 / PN10)
- 6.- Water outlet (DN25 / PN10)
- 7.- Water return (DN25 / PN10)

TANK WITH INTERNAL VAPORIZER + MODULAR HEATING UNIT

- Set comprising:
- 1- Tank with internal vaporizer with full valve equipment and control train to consumption.
 - 2- Support frame.
 - 3- Heating module.
 - 4- No-gas device.
 - 5- Gas control line.

Installation to be carried out at destination site:

- Control cable (flameproof)
- - - - - Propane: boiler supply
- Water: heating circuit internal vaporizer

MODULAR FEED-OUT VAPORIZERS

- The system allows the vaporization capacity to be increased by easy replacement of the plate exchanger.
- Vaporization capacities of 500 to 5.000 kg/h.
- Design pressure: 20 bar.
- Rated operating conditions:
Water input temperature: 55°C.
Input-output temperature: 20 °C.
Vaporization pressure: 4 bar.

CHARACTERISTICS TABLE

MODULAR VAPORIZATION UNITS EMV models

- They allow direct use of tank gas when consumption is small.
Gas supply to boiler.
Complete unit comprising:
- Modular vaporizer
 - Condensate separators
 - Control train
 - Valves and safety elements

MODULAR HEATING UNITS. EMC models

- Complete unit comprising:
- Heating boiler
 - Pump
 - Regulators, pressure switches, etc.
 - Electric control panel (for boiler module and vaporization module)
 - Gas detection alarm system

MODULAR HEATING-VAPORIZATION SETS

- This is a set formed by the following elements:
- 1 - Vaporization module with EMV modular vaporizer
 - 2 - MC heating module.

On-site installation consists of connecting the gas and heating pipes between the modules (tank to vaporization module and this module to the heating module) and wiring up between booths.

AUTOGAS SKIDS

Horizontal aboveground SKID

Vertical aboveground SKID

Underground SKID

- Stand-alone LPG storage units with pumping equipment and dispenser incorporated in a frame.
- Includes transfer equipment to allow the supply of gas in liquid phase to vehicles, with the maximum guarantee of safety.

- Simplified installation: only requires connection of power supply to the unit and anchoring to the ground (with earth connection).

COMPOSITION

LPG STORAGE TANK:

Standard Lapesa tank with a design pressure of 20 bar and special connections for transfer unit.

FRAME:

A support structure that houses the complete installed unit.

LPG TRANSFER LINES:

- Liquid phase outlet line: Includes limiter, shutoff valve and filter for liquid LPG placed before the pump.
- Return line to tank (protects the pump from overpressure) with a by-pass valve.
- Pump-to-dispenser transfer line: Includes safety valve and pressure gauge (LPUA types include shutoff valve with the supply column, in LPUAS model the shutoff valve is integrated in the dispenser).

LPG TRANSFER PUMP:

Specific for LPG in liquid phase.

Nominal values for standard pumps:

- Aboveground skids: 40 l/min (5 bar differential pressure).
- Underground skids LPUA**E-BME: 114 l/min (10 bar differential pressure).
- Underground skids LPUA**E-BMS: 90 l/min (10 bar differential pressure).

SUPPLY UNIT:

- Hose specific for LPG, compliant with EN14678-1 and EN1762.
- Break away included in hose.
- European nozzle according to EN13760.
- Distances to supply unit allow the placement of fencing in the storage area.
- Tanks with filling column: Include hose with nozzle, break-away, start/stop button ("dead man" type), push-button for emergency stop, housing for nozzle. Equipment designed for use with own truck fleet, where commercial transactions are not performed and where number of liters exchanged is not required.

- Tanks with dispenser: Besides the usual items of a dispenser, it also includes totalizers of liters and euros. Equipment designed for installation in service stations, or for consumption control in own truck fleet.
- Units for underground use: Supplied without supply unit (filling column or dispenser). They are ready for use with dispenser.

ELECTRICAL INSTALLATION:

Skids are supplied with electrical installation mounted. Complies with spanish low voltage electrotechnical regulation.

Electrical installation complies with the Spanish norm for low voltage installations and its annex ETB026 (areas with risk of explosion).

Includes:

- Hoses with mechanical protection, length 30 meters, connected at both ends. Three types of hoses are present:
 - Between pump and cabinet.
 - Between supply unit and cabinet.
 - Between pump and supply unit.
- Electrical cabinet complete will necessary items (limiter, differential, motor-saver). It must be installed in safe zone (outside of ATEX zone). Installation designed for triphasic electrical connection.

ELECTRICAL ACTUATOR (OPTIONAL):

Electrical actuator on liquid phase outlet. This device closes flow when emergency stop is pressed or when the electric supply is down. Specially recommended for skids without filling column nor dispenser (LPUASP**)

BREAKAWAY COUPLINGS (OPTIONAL):

In the case of dispenser (not filling column), excess flow valves with breakway couplings, to avoid an LPG leakage if a vehicle hits the dispenser.

PREVENTION/SAFETY:

Dry-powder fire extinguishers according to LPG tank size, incorporated in the frame unit. The electrical cabinet should be located in a safe zone.

LPUA**

Stand-alone units with filling column (supply hose, "deadman" button and emergency pushbutton). Ideal for in-house consumption, where no commercial transactions are carried out and the litres supplied do not need to be recorded. Supplied with electrical installation.

SPECIAL DESIGNS "L" SHAPE
for installation in placed with reduced space or to facilitate access to vehicles (please consult)

LPUAV**

Stand-alone units with filling column (supply hose, "deadman" button and emergency pushbutton). Supplied with electrical installation. Ideal for in-house consumption, where no commercial transactions are carried out and the litres supplied do not need to be recorded. Due to their large dimensions, for transport purposes the skid is supplied loose, to be mounted to tank at destination, except for LPUA2450V and LPUA5000V models.

CHARACTERISTICS TABLE

Model Ref.	weight. (Kg.)	Dimensions (mm)							Connection	Size	Thread

TRANSPORTABLE TANK FOR LPG

Tank for storage and transport of LPG.

Its design and homologation allow it to be used as static tank (2014/68/UE) as well as transportable tank (99/36/CE), it includes two CE conformity declarations.

Equipment designed for vertical handling and use.

LPG storage with minimum safety distances.

TRANSPORTABLE TANK: LT1000V

NOMINAL CAPACITY: 990 liters

MAXIMUM OPERATING PRESSURE: 20 bar

TARE (APPROX.): 390 kg

TWIN STAMP:

- Static equipment **CE** (2014/68/UE)
- Transportable equipment **π** (99/36/CE-ADR)

TANK CONNECTIONS

Ref.	Function	Size	Thread

TANK CONTAINERS

20, 30 and 40-ft tank containers for transporting LPG overland (road or rail) and by sea.

High-strength steel cylindrical container with breakwater plates inside and korbogen type dished ends, built in reinforced steel ISO-container structure.

(The characteristics of the tank containers described below are for Lapesa type models. Any adaptation of a design to a customer's specific requirements shall involve a new project and the corresponding type-approval).

General/standard characteristics

- Tank-container for the transport of ADR class 2 liquefied gas under pressure, Type 1AA container according to ISO 668.
- Built according to ADR, ISO, CSC, IMDG code
- Product to be contained: LPG (UN 1965), commercial propane and butane.
- ADR design pressure: 27 bar.
- Maximum working pressure: 20.77 bar.
- Test pressure: 27 bar.
- Design temperature: -20 +50°C.

Controls and tests

- Inspections as per design code.
- 100% weld x-raying.
- Hydraulic test at 27 bar.
- Valve tightness test.
- ISO load tests on prototype container.
- ISO, CSC tests.

Equipment

- Background internal valves with flow limiter and opening via automatic return lever, for connections to liquid phase and gas phase, with "fire-safe" type ball valve, sealable with blind cap.
- Valve with pressure gauge and high point indicator.
- Rotating level.
- Background drain valve.
- Internal overpressure safety valve.
- DN500 manhole located on rear head.
- Side metal cabinet for valves.

External finish

- Shot-blasting of unit SA 2 1/2.
- Anti-corrosion protection of surface with coat of polyamide epoxy (60 microns).
- Top coat of white polyurethane (60 microns).

Model	CONTAINER-TANK	LTC52-GLP	LTC38-GLP	LTC25-GLP

Load LPG	mt	21,85	16,1	10,3

**SEMI-TRAILER
TANKER**

for transport
and distribution
of **LPG**

Tanker type features:

- Products to be transported, liquid gases class 2 (ADR): propane, butane, isobutane, mixtures, etc.
- Manufactured under applicable European Directives: 2010/35/UE (π marking), 2008/68/CE.
- Applicable regulations: ADR, EN12493, IMO8 (optional).
- Maximum working pressure: 19,2 bar.
- Design and test pressure: 25 bar.
- Inspections and controls according to ADR.
- Anticorrosive primer finish (high strength cataphoresis for the frame) and white polyurethane finish (blue chassis).

OVERALL DIMENSIONS FOR A 44 TON SET

- Nominal capacity: 52 m³
- Approximate tare: 14 Ton
- LPG load: 21,8 Ton

INCLUDED ELEMENTS IN A BASIC TANKER

- Internal baffles inside for transport with partial filling.
- Aluminum sunshade in the upper area of the cylinder.
- DN500 inspection manhole.
- Loading cabinet in the central area, with access from both sides.
- Distribution cabinet in the central area, right side.
- Rolling set with the following characteristics:
 - Complete frame, for better distribution of loads, and long life.
 - SAF axes or similar.
 - Aluminum wheels.
 - ADR electrical installation.
 - Parking brake by 2-axis pneumatic actuators.
 - EBS 2S / 2M. Disc 430 x 45.
 - Shaft elevator.
 - Mud wing set, wheel wrenches, aluminum bumpers, tooldrawer, two fire extinguishers with box ...

LPG EQUIPMENT

- Pneumatic operated bottom valves, REGO or similar.
- Manual stopvalves, ball type, with stainless steel sphere.
- Blackmer 3" type pump. With hydraulic motor. With Blackmer 1-1 / 2" bypass.
- Liquid Control type volumetric counter with temperature compensator. Electronic head. Printer in separate cabinet.
- Hose 1-1/4" (28 meters), in winder with pneumatic/hydraulic reel.
- Connections to gas or liquid phase, finished in flange.
- Optionally, the terminal will be placed according to the customer needs.
- All pipe sections are protected by relief valves, either manual or automatic.
- Other tank valves:
 - REGO type rotating level.
 - Internal safety valves, REGO type (IMO case).
 - High point indicator and pressure gauge.
 - Temperature indicator.

lapesa
Solutions

We adapt our products to the needs of our clients (truck, capacity, equipment, sunshade, etc.). An example of a tanker is shown in this catalog. Check with us your requirements.

EMERGENCY/SAFETY SYSTEMS

- The tanker includes **6 emergency pushbuttons** in various tanker locations. When manually activated, they close the tanker stopvalves and the pump switches to stop mode.
- **Detector for closed cabinet:** When valves cabinet is closed (no intention for LPG transfer), this detector closes the tanker stop valves and the pump switches to stop mode.
- **Parking brake:** Tanker stop valves can only be opened when the parking brake is activated.
- **Anti-start system:** In case the truck tries to be started with the valves cabinet open, this safety system acts on the truck brakes, leaving them constantly activated. To avoid a possible wrong contact during truck driving, that could cause a sudden break on road, this system only acts when speed is below 5 km/h (when starting the truck).

HYDRAULIC INSTALLATION:

- For the correct operation of the hydraulic circuit that moves the LPG pump, the tractor unit must have a power intake, hydraulic pump, oil tank, cooler...

FINAL DOCUMENTATION

- Manufacturing dossier.
- ADR documentation.
- Instructions manual.
- Technical drawing
- Complete documentation of vehicle homologation.

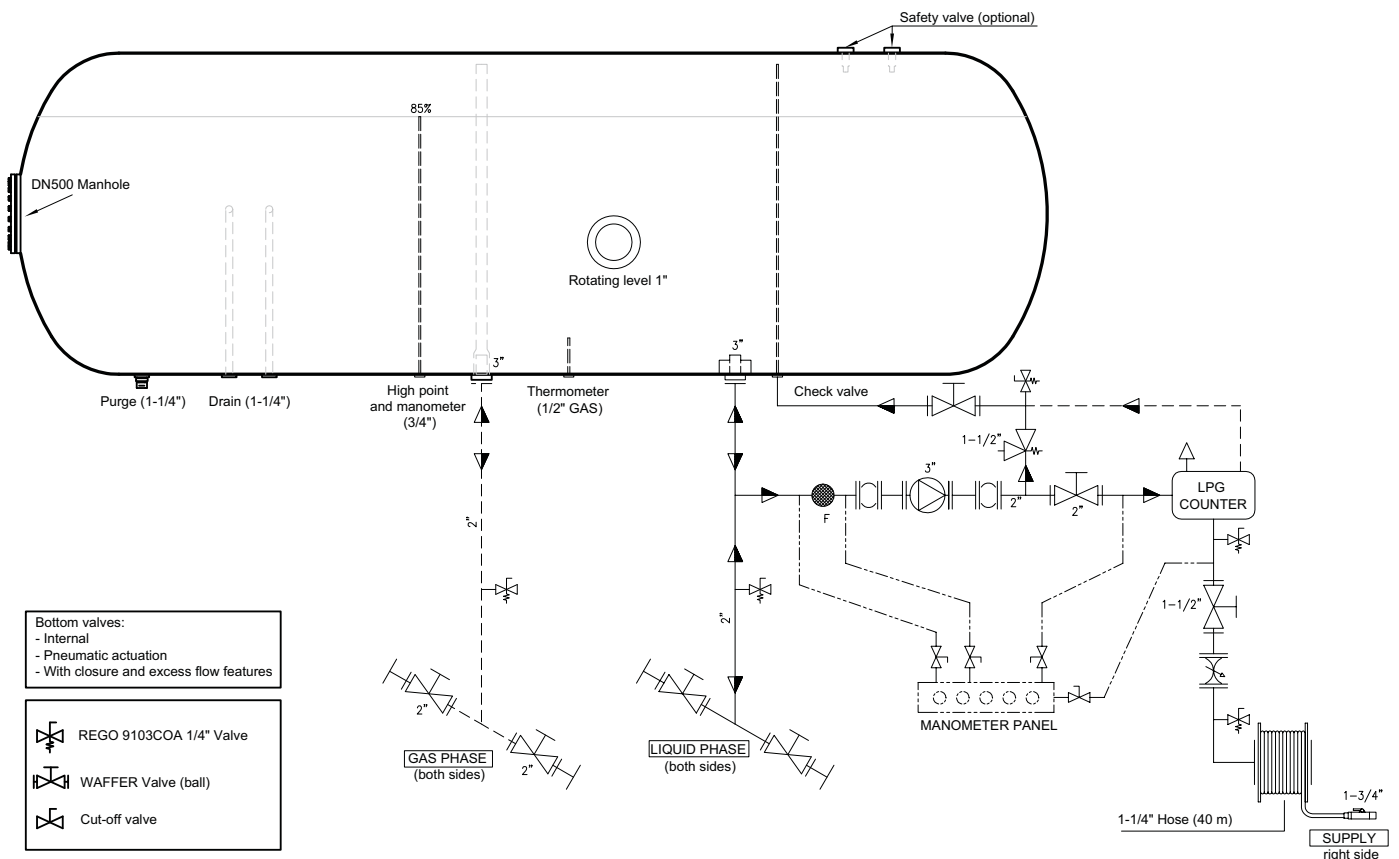

SOME EXAMPLES OF OPTIONAL ELEMENTS:

- Loading connections in the rear area.
- Auto-filling equipment, which allows the pump to be used to fill the tank
- Tank inertization.
- Thermal treatment.
- IMO8 (allows to transport the tanker by ship, for short distances).
- Finished with customer image, logos...
- Different brands for transfer equipment.
- Stainless steel pipes.
- Fire Safe Valves.
- Specific connections to gas phase and liquid phase.
- Extras in rolling unit:
 - Polished wheels.
 - Third autodirectional axis.
 - Integral LED lights.
 - Load distributor ... and many more.

PIPING AND INSTRUMENTATION (P&ID) LTT52

TANKER TRUCK

for transport and distribution of **LPG**

Tank type features:

- Products to be transported, liquid gases class 2 (ADR): propane, butane, isobutane, mixtures, etc.
- Manufactured under applicable European Directives: 2010/35/UE (π marking), 2008/68/CE.
- Applicable regulations: ADR, EN12493, IMO8 (optional).
- Maximum working pressure: 19,2 bar.
- Design and test pressure: 25 bar.
- Inspections and controls according to ADR.
- Anticorrosive primer finish (high strength cataphoresis for the frame) and white polyurethane finish (blue chassis).

OVERALL DIMENSIONS FOR A 3 AXLE TRUCK (26 TONS)

- Nominal capacity: 28 m³.
- Estimated tare weight of the truck without tank: 7.4 Ton.
- Approximate tare of the set: 14 Ton.
- LPG load: 12 Ton.

INCLUDED ELEMENTS IN A BASIC TANKER

- Internal baffles inside for transport with partial filling.
- Aluminum sunshade in the upper area of the cylinder.
- DN500 inspection manhole.
- Loading cabinet in the central area, with access from both sides.
- Distribution cabinet in the central area, right side.
- Other: ADR plates, fire extinguishers.

EMERGENCY/SAFETY SYSTEMS

- The tanker includes **6 emergency pushbuttons** in various tanker locations. When manually activated, they close the tanker stopvalves and the pump switches to stop mode.
- **Detector for closed cabinet:** When valves cabinet is closed (no intention for LPG transfer), this detector closes the tanker stop valves and the pump switches to stop mode.
- **Parking brake:** Tanker stop valves can only be opened when the parking brake is activated. Option to be specified (in coordination with the truck supplier).
- **Anti-start system:** In case the truck tries to be started with the valves cabinet open, this safety system acts on the truck brakes, leaving them constantly activated. To avoid a possible wrong contact during truck driving, that could cause a sudden break on road, this system only acts when speed is below 5 km/h (when starting the truck). Option to be specified (in coordination with the truck supplier).
